

Children from the richest households are more than twice as likely to be registered as children from the poorest households

Percentage of children under age five whose births are registered, by household wealth quintile and by region

In most countries, a family's wealth is correlated with higher birth registration rates

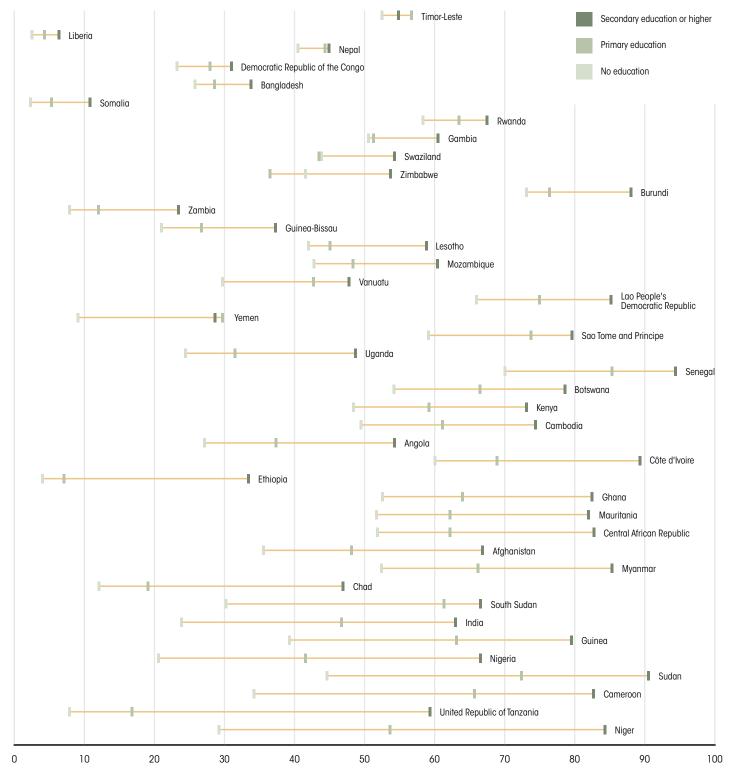

Percentage of children under age five whose births are registered, by household wealth quintile

Notes for chart above: Estimates are based on a subset of 140 countries covering 72 per cent of the global population of children under age five. Regional estimates represent data from countries covering at least half of the regional population. Data coverage was insufficient to calculate regional estimates by nousehold wealth quintiles for East Asia and the Pacific and for Latin America and the Caribbean. The estimates presented in this figure cannot be compared with the regional and global estimates presented in previous figures since they are based on a subset of countries with available data. Their sole purpose is to illustrate differentials Sources for chart above: UNICEF global databases, 2013. Based on DHS. MICS. other national household surveys, censuses and vital registration systems, 2005-2012.

Children of mothers with some level of education are more likely to be registered

Percentage of children under age five whose births are registered, by mother's level of education in countries with birth registration levels equal to or below 75 per cent

Note: Data for Liberia and Yemen refer to the percentage of children under age five with a birth certificate. Sources: UNICEF global databases, 2013. Based on DHS, MICS and other national household surveys, 2001-2012.
